Investment approach

- The Fund seeks to provide long-term growth of capital by tracking the performance of the index, a market-capitalisation-weighted index of common stocks of large- and mid-cap companies in developed and emerging countries.
- The Fund employs a passive management or indexing investment approach through physical acquisition of securities, designed to track the performance of the index, a free-float-adjusted market-capitalisation-weighted index.
- The Fund will invest in a portfolio of equity securities that, so far as possible and practicable, consists of the component securities of the index.

About the benchmark

- The index measures the market performance of large- and mid-capitalisation stocks of companies located around the world.
- Includes approximately 2,900 holdings in nearly 47 countries, including both developed and emerging markets.
- Covers more than 90% of the global investable market capitalisation.

Performance summary as at 30 April 2018 *

USD—Vanguard FTSE All-World UCITS Fund

	Net of expenses	Benchmark
April 2013 – 2014	14.36%	14.36%
April 2014 – 2015	7.69	7.64
April 2015 – 2016	-5.56	-5.52
April 2016 – 2017	15.21	15.25
April 2017 – 2018	14.14	14.14

Performance *

USD—Vanguard FTSE All-World UCITS Fund
Benchmark—FTSE All-World Index

	Net of expenses	Gross of expenses	Benchmark
1 month	1.04%	1.06%	0.96%
3 months	-5.35	-5.30	-5.34
Year to date	-0.06	0.02	-0.04
1 year	14.14	14.43	14.14
3 years	7.49	7.76	7.51
5 years	8.87	9.14	8.88
Since inception	11.46	11.74	11.44

* Figures for periods less than one year are cumulative returns. All other figures represent annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. The performance data does not take account of the commissions and costs incurred in the issue and redemption of shares. Basis of fund performance NAV to NAV with gross income invested. Basis of index performance is total return.

Past performance is not a reliable indicator of future results.

** Synthetic Risk and Reward Indicator

*** The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

This document is for professional investors only (as defined under the MiFID II Directive) investing for their own account (including management companies (fund of funds) and professional clients investing on behalf of their discretionary clients). Not to be distributed to the public.

Vanguard FTSE All-World UCITS Fund

An exchange-traded fund

Characteristics

	Fund	Benchmark
Number of stocks	3,129	3,176
Median market cap	\$53.2B	\$53.2B
Price/earnings ratio	16.9x	17.0x
Price/book ratio	2.2x	2.2x
Return on equity	13.9%	13.9%
Earnings growth rate	8.8%	8.8%
Non-US holdings	47.7%	—
Cash investments	0.0%	—
Turnover rate	6%	—
Equity yield (dividend)	2.3%	2.3%

The PTR (Portfolio Turnover Rate) approach considers the total security purchases and sales, the total subscriptions and redemptions and the average net assets of the fund to calculate the turnover figure. Data as at 31 March 2018.

Key investment risks

The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.

Counterparty risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Liquidity risk. Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

Index tracking risk. The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Bond risk. The Fund invests in bonds which may provide higher yields but as such may carry greater credit risk increasing the risk of defaults on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

Index sampling risk. As the Fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the Fund may not, in the aggregate, approximate the full Index.

Please also read the risk factors section in the prospectus and the Key Investor Information Document, both of which are available on the Vanguard Website.

Weighted exposure

	Fund	Benchmark
Basic Materials	4.6%	4.7%
Consumer Goods	12.4	12.4
Consumer Services	11.0	11.0
Financials	22.7	22.7
Health Care	10.2	10.2
Industrials	12.8	12.8
Oil & Gas	6.5	6.5
Technology	13.9	13.9
Telecommunications	2.9	2.8
Utilities	3.0	3.0
Total	100.0%	100.0%

Sector categories are based on the Industry Classification Benchmark system ("ICB"), except for the "Other" category (if applicable), which includes securities that have not been provided an ICB classification as of the effective reporting period.

Australia	2.3	2.3
Korea	1.8	1.8
Total	85.4%	85.2%

Vanguard FTSE All-World UCITS Fund

An exchange-traded fund

Investment Risk Information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Some funds invest in emerging markets which can be more volatile than more established markets. As a result the value of your investment may rise or fall.

Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

ETF shares can be bought or sold only through a broker. Investing in ETFs entails stockbroker commission and a bid-offer spread which should be considered fully before investing.

The fund(s) may invest in financial derivative instruments that could increase or reduce exposure to underlying assets and result in greater fluctuations of the fund's Net Asset Value. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Some funds invest in securities which are denominated in different currencies. Movements in currency exchange rates can affect the return of investments.

Glossary for ETF attributes

The ETF attributes section on the first page contains a number of metrics that professional investors use to value individual securities against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the securities held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Earnings growth rate is a measure of growth in a company's net income (what remains after subtracting all the costs from a company's revenues) over a specific period (often one year). Earnings growth can apply to previous periods or estimated data for future periods.

Equity yield (dividend) is the dividend income earned by stocks, expressed as a percentage of the aggregate market value (or of net asset value, for a fund). Quoted historic yield is determined by dividing the gross distributions declared over the last 12 months by the average of the bid and ask unit prices, as at the date shown. The dividend yield stated on the factsheet applies to the underlying holdings of the ETF, and not the ETF itself.

Market capitalisation is the aggregate value of a company or stock and is calculated by multiplying the number of shares which are available to retail investors by the current price per share.

Median market cap (capitalisation) looks at all companies in a mutual fund portfolio and calculates the mid point market capitalisation. Market capitalisation represents the aggregate value of a company's stock.

Mid market share price is the price of a share between its offer and bid price.

Price book ratio compares a stock's market value to its book value (the accounting value of a stock). It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

Price earnings ratio (P/E ratio) of a stock is the price paid for a share divided by the annual profit earned by the firm per share. A stock with a price of £10 a share, and earnings last year of £1 a share, would have a P/E ratio of 10.

Return on equity is a measure of a company's profitability that reveals how much profit a company generates with the money shareholders have invested.
